# **Engineer a Greenhouse**

## Overview:

Youth will use the engineering design process to design, build and test a model greenhouse.

#### Goals:

- Explain how greenhouses are used.
- Use the Engineering Design Process to design, build, and test a greenhouse

Time Required: 1.5 hours

## **Materials:**

- Paper plant models (best printed on cardstock) available at: <a href="https://4-h.org/clover/activities/engineer-a-greenhouse/">h.org/clover/activities/engineer-a-greenhouse/</a>
- Scissors
- · Popsicle sticks
- Chenille sticks
- Masking tape
- Plastic wrap
- Tissue paper
- Rubber bands
- Paper clips
- Poster putty
- Hot glue gun (with adult supervision)

\*Feel free to modify the list with craft materials you have available.

#### Procedure:

- 1. Before beginning, review the Engineering Design Process.
- 2. Ask students if they have ever been to a greenhouse. What did they notice?
- 3. Tell students, "Greenhouses are designed so that botanists can easily grow plants year-round". Ask students what kinds of plants they would like to grow in a greenhouse.
- 4. Students will work with their groups to choose which plants they would like to grow in their greenhouse. Choices include: Peppers, Tomatoes, Lettuce, Strawberries, Corn, Egplant, Carrot, Cauliflower, Broccoli, and Blueberries.
- Encourage groups to choose at least 3 different plants and have no more than 6 plants total in their greenhouse. Record the plants (kind and how many) they chose to use on their worksheet.

For example they could choose 2 cauliflower, 2 broccoli, and 2 carrots or they could choose 1 blueberry, 2 strawberry, and 1 tomato.

# Engineer a Greenhouse

- 6. Have students select their plants and construct the 3-D models.
- 7. Tell students, "Remember the first step in the Engineering Design Process is to Identify the problem." Ask students, "What problem are we trying to solve?"
- 8. Have students record the problem in their Mission Notebook.

  Build a greenhouse large enough for the paper plants to grow.
- 9. Next, show students the materials they have available to build their greenhouses. Give them some time to brainstorm some ideas. What materials might they want to use?
- 10. Ask students to think about how we will know if we build a successful greenhouse. What criteria do we need to meet? Have students record these criteria in their greenhouse.
  - must be a stable, free-standing structure
  - have room for all selected plants to grow
  - made of transparent materials to allow light to enter
- 11. Have students sketch a picture of their design on their worksheet. Label their sketch to show what materials they plan to use.
- 12. Have students build their greenhouse.
- 13. Once students are finished with the build, test the greenhouse by putting the 3-D plants inside. Does your greenhouse meet the criteria? If not, redesign!
- 14. Have students complete the questions on their worksheet.

# Adapted from the following lesson:
